

Developer Name: Sam Danso	Branch Name: Course Creation View - Course Setup with Roster Import Current Branch URL: https://github.com/Fatma-S/simple_html/issues/18
Progress:	<ul style="list-style-type: none"> • Utilized the provided Scrum template to manage the class project. • Created initial user story documentation with Who/What/Why framework • Created a Course Creation View User Story branch to implement the course creation interface, allowing instructors to add course details and upload student rosters.
Challenges:	<ul style="list-style-type: none"> • Inconsistent use of labels across related issues making it difficult to filter and prioritize work • Hard to see which issues are connected to each other • Hard to tell which issues should be worked on first when they're all separate. • Difficulty in linking local to GitHub interface.
